Problem Statement -

Problem Statement: AI Agent for Digital Financial Literacy

The Challenge

An AI Agent for Digital Financial Literacy, powered by RAG (Retrieval-Augmented Generation), helps users understand and navigate essential financial tools and practices. It retrieves reliable content on using UPI, avoiding online scams, understanding interest rates, budgeting and personal finance management from government portals, banking websites and educational platforms.

With multilingual support, users from diverse backgrounds can interact in their preferred language and ask questions like “How do I send money via UPI?” or “What is a safe interest rate for a loan?” The agent makes financial literacy accessible, personalized and culturally inclusive. This AI-driven assistant empowers users with knowledge, protects them from fraud and builds confidence in digital finance.

Why This Problem Matters

- **Rapid digital adoption –** millions of people now use UPI and mobile banking, often without guidance on safe use.
- **Fraud and costly mistakes –** scams, phishing and unaffordable loans hit first-time and vulnerable users hardest.
- **Scattered, hard-to-use information –** trusted guidance is spread across portals, written in jargon and often only in English.

Technology: IBM Cloud Lite services and IBM Granite (mandatory) are used to build the solution.
